Buono Products

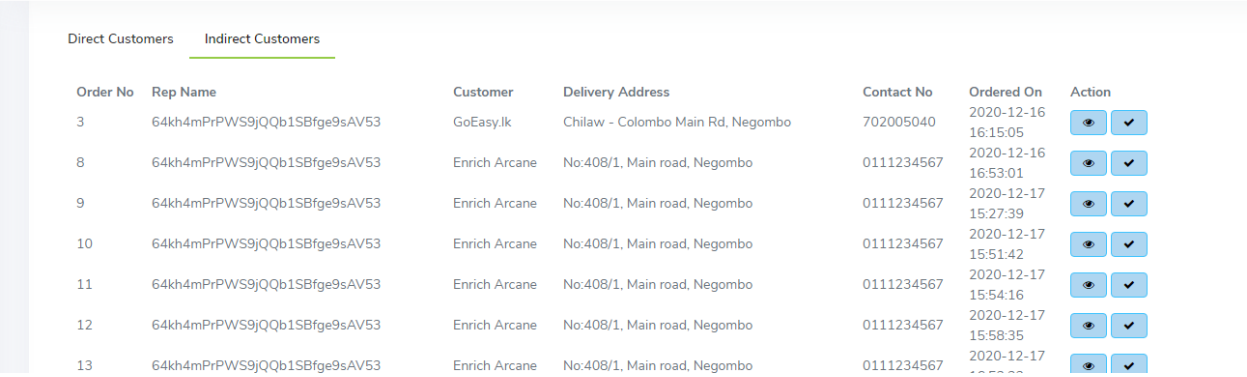

Backend

- Cannot edit sales rep's detaiils

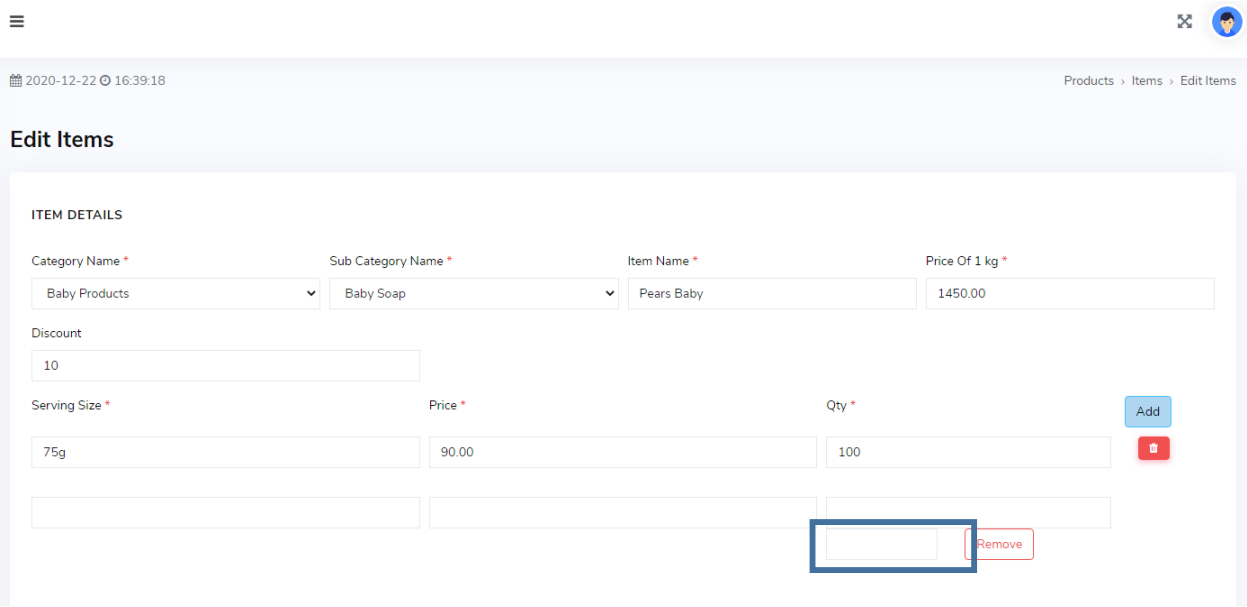

- Sales reps names are not readable in new orders – cannot check this because cannot create new sales reps from the backend

–

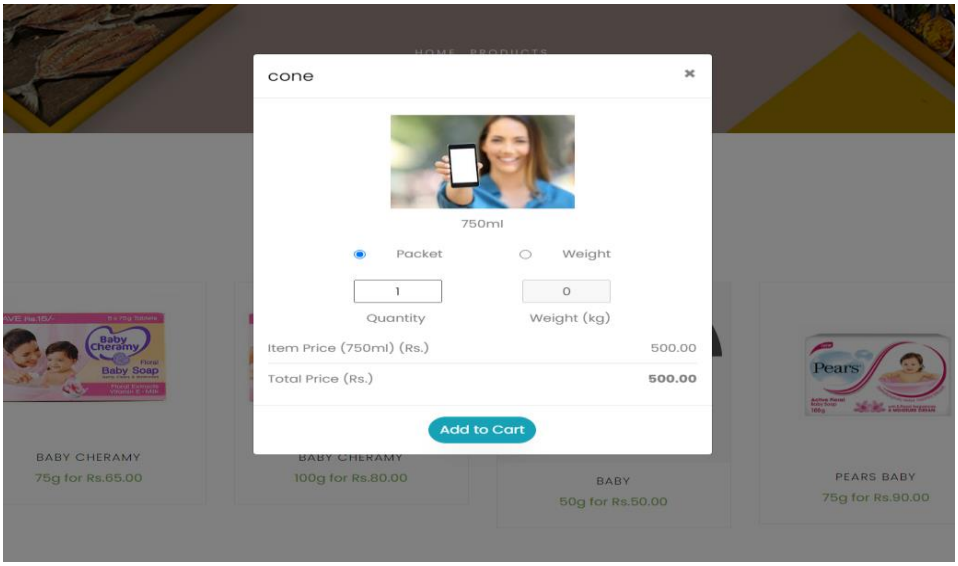

- When complete sales rep orders, that orders should be appear from the completed order section
- There is no place to view sales reps orders balance amounts.
- If products are out of stocks they are still showing same quantity on the representative stocks
- Completed order products are not match with the sales rep order products. (some products are missing)
- Representative sales report is not working and it heading should be change as 'Representative Sales Report' instead of 'sales report'
- Daily sales report is not working properly

- Daily customer sales report is not working properly and it heading should be change as ‘Daily Customer Sales Report’ instead of ‘sales Report’
- Rep Day summery report is not working
- The indirect customers are not showing in the backend
- The indirect customers approve and reject is not working properly
- When add new serving sizes for the items (when edit an item), adding a new text field.

Frontend

- When there are 2serving sizes for an item in the backend, that will appear as two items in frontend and if added from one size product to the cart, all other sizes products also will added to the cart. (as an example if added 100g 3 packets to the cart also adding 200g packets as well) – (Cannot check add to cart button is working)
- When click ‘add to cart’ button the showing details are not correct (as an example I have clicked baby cheramy product but appeared model display product is cone)

- New added products add to cart button is not working

Mobile App

- Cannot check login with new user (because cannot create new sales reps from the backend)
- When add a photo in shop creation screen, the app will reopen and cannot add a shop
- Newly added shops doesn't view in the shop list – cannot check because cannot create new shops
- When print an invoice the weight products are display in the invoice print as 'weight' instead of the Kg
- The blocked items are can view from the mobile app and that products also can add to the cart
